AC54 SD卡升级全部代码(含uboot)方法

SD卡升级UBOOT,需在SD卡中放入jl_lsd.bin、JL_AC54.bfu以及UI文件,其中JL_AC54.bfu需要在新的sdk基础上制作,并且仅用作升级uboot这一种方式。

注意:一卡升多机的情况,为确保升级提示正常,请不要接电脑usb,使用正规外接电源进行升级。

1、jl_isd.bin制作

使用要更新的SDK下载目录,点击下载代码.bat生成iLisd.bin

2、制作升级代码(JL_AC54.bfu)

app/car_camera/upgrade.c 中:

打开 #define UPGRADE_UBOOT (正常的SDK中请关闭此宏)或尝试如下修改,都可实现升级功能,修改后执行 升级文件.bat 生成JL_AC54.bfu。

1) UPGRADE_UI_PATH 宏

"#define UPGRADE_UI_PATH CONFIG_ROOT_PATH"
将升级UI路径指向SD卡根目录,对应的目录要放
入upgrade.asi、upgrade.pic、upgrade.str、upgrade.sty

2) start_upgrade_detect() 函数中,

```
修改:
294 #ifdef UPGRADE_UBOOT
295 req.file = fopen(UPGRADE_PATH"jl_isd.bin", "r");
296 #else
297 req.file = fopen(UPGRADE PATH"JL AC54.bfu", "r");
298 #endif
299
300 #endif
301 req.complete = upgrade_complete;
302 req.confirm = upgrade_confirm;
303 req.ui.step_msecs = 200;
304 req.ui.show_progress = upgrade_show_progress;
305 req.ui.show_message = upgrade_show_message;
306 req.ui.path = UPGRADE_UI_PATH;
307 #ifdef UPGRADE UBOOT
308 \text{ req.type} = 0x65;
309 \text{ req.force} = 0x12;
310 #endif
```

3) 一张卡升多个机器情况下, upgrade_complete()函数中,

```
修改:
175 #ifdef UPGRADE_UBOOT
176 int msg[32];
177 while (dev_online(SDX_DEV)) {
178 os_time_dly(2);
179 os_taskq_accept(ARRAY_SIZE(msg), msg);
180 }
181 #endif
182 if (!__this->ui || !__this->ui_enable) {
183 return -EINVAL;
184 }
```
